

## ASSIGNMENT-1

NAME:R.SABANA[PNT2022TMID10916]

### Question-1:

Write a program which will find all such numbers which are divisible by 7 but are not a multiple of 5, between 2000 and 3200 (both included). The numbers obtained should be printed in a comma-separated sequence on a single line.

### SOLUTION:

```
l=[]  
for i in range(2000, 3201):  
    if (i%7==0) and (i%5!=0):  
        l.append(str(i))  
print(','.join(l))
```

### Question-2:

With a given integral number n, write a program to generate a dictionary that contains (i, i\*i) such that is an integral number between 1 and n (both included). and then the program should print the dictionary.

Suppose the following input is supplied to the program:

8

Then, the output should be:

{1: 1, 2: 4, 3: 9, 4: 16, 5: 25, 6: 36, 7: 49, 8: 64}

### SOLUTION:

```
n=int(input())  
d=dict()  
for i in range(1,n+1):  
    d[i]=i*i  
print(d)
```
